42

The weekly proportion of influenza-like illness visits per 1,000 patients,
2005-2006 season - 2009-2010 season

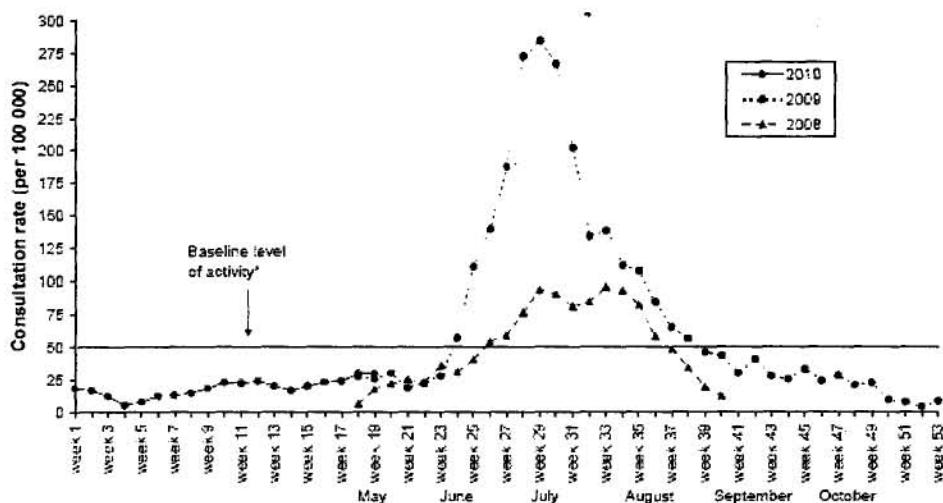

Confirmed Influenza A(H1N1)
Cases Until Aug. 19

ニュージーランド

Figure 2: Weekly consultation rates for influenza-like illness in New Zealand, 2008, 2009 and 2010

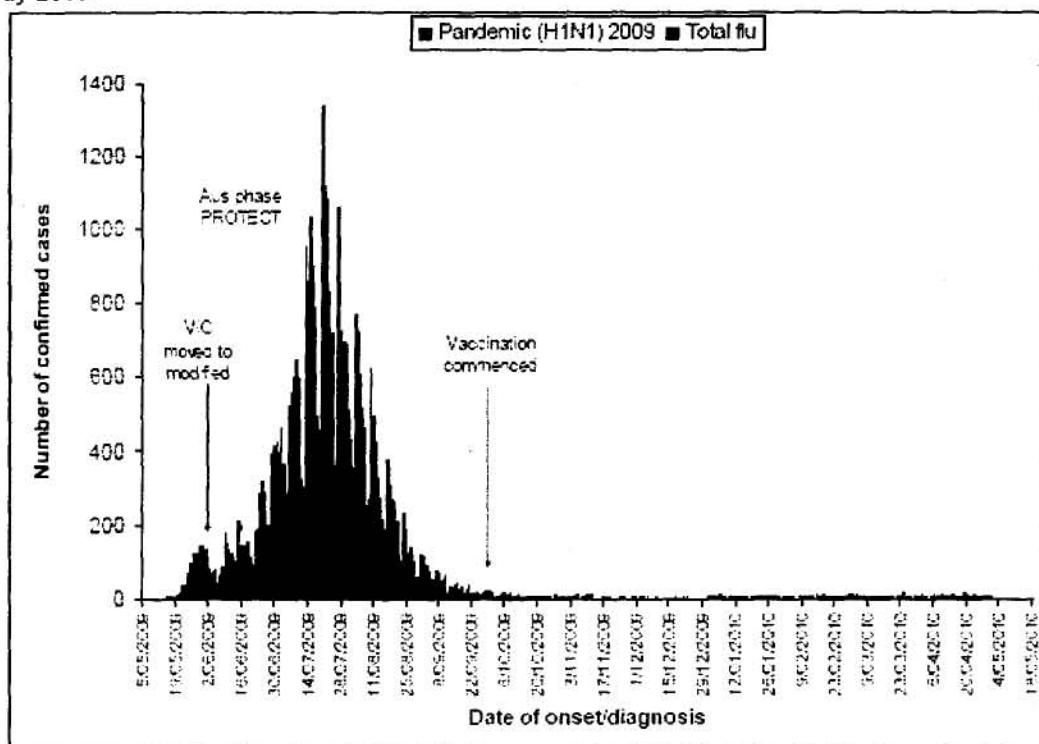

* A weekly rate <50 ILI consultations per 100 000 patient population is considered baseline activity. A rate of 50–249 is considered indicative of normal seasonal influenza activity, and a rate of 250–399 indicative of higher than expected influenza activity. A rate >400 ILI consultations per 100 000 patient population indicates an epidemic level of influenza activity.

Figure 3. Weekly rate of ILI reported from GP ILI surveillance systems from 1 January 2007 to 2 May 2010*

* Delays in the reporting of data may cause data to change retrospectively. As data from the NT surveillance system is combined with ASPREN data for 2010, rates may not be directly comparable across 2007, 2008 and 2009.
